

ISSUES AND RESPONSE REPORT (IRR) – THE PROPOSED DEVELOPMENT OF A CO-GENERATION FACILITY – BEATRIX MINE, THEUNISSEN, FREE STATE

SECTION 1: ISSUES AND COMMENTS RECEIVED FINAL BASIC ASSESSMENT PHASE: JANUARY 2013

The Issues and Response Report (IRR) as per the tables below consolidate all input received throughout the Public Participation Process (PPP) to date, including comments received after distribution of the Background Information Document (BID) and the Final Basic Assessment Report. The IRR intends to summarise the comments received through filtering out and flagging the issues and concerns raised by the IAP. The IRR aids the identification and evaluation (Impact Assessment Phase) of the impacts identified by all Interested and Affected Parties (IAPs). Note that the IRR has been amended to include comments received during the comments period on the Final Basic Assessment Report (BAR).

Refer to **Appendix E** for a complete record of all the comments received. Comments made during the stakeholder meetings are captured in the meeting minutes in **Appendix E6** and have not been included in this register. The tools used to inform Interested and Affected Parties (IAP) of the project and the way in which comments from IAPs were solicited is noted in **Section C**, the PPP Chapter of the Draft and Final Basic Assessment Report.
